2014 Legislative Agenda

Increase Funding for WSDOT's Safe Routes to Schools Program

Include Pedestrians in any Statewide Transportation Funding Package

Support Adding Health as a Statewide Transportation System Policy Goal

Reform the Rules of the Road Requirement that Pedestrians Completely Leave the Roadway Every Time a Car Approaches

increase funding for WSDOT's Safe Routes to Schools program

Introduced in the 2013 regular session, Senate Bill 5506 requires dedication of at least \$10.4 million to the Safe Routes to School program each biennium. The federal funds must come half from the Transportation Alternative program and half from the Highway Safety Improvement program.

- Since its inception in 2005, this program provides technical assistance and resources to cities, counties, school districts, and state agencies for efforts to encourage more children walking and bicycling to school safely.
- This Safe Routes to Schools program funds small-scale capital improvements to improve safety near schools such as sidewalks, traffic calming, and road crossings. It also provides assistance to municipalities for enforcing school zone safety through efforts such as crossing guards, neighborhood watch programs, vehicle speed feedback signs, and law enforcement assistance.

Mission

who we are - what we do

Feet First promotes walkable communities and envisions people walking every day for their health, transportation, environment, community, and pleasure.

2014 Legislative Agenda

- Lack of physical activity has a terrible impact on children's health, including increased obesity rates. Walking to school every day is a great way to give students some badly-needed physical activity and instills walking as a life-long habit. A morning walk also helps them concentrate better at school.
- More students must walk to school due to reductions in yellow bus service because of funding constraints. The Safe Routes to Schools program helps ensure that these children can safely walk to school.
- The need is great. During the 2011-2013 biennium, WSDOT received 124 grant applications totaling \$43 million. However, due to limited funding it could only support 29 grant requests worth \$11 million.
- The Safe Routes to School program gets results. Individual projects have increased school walking rates by an average of 20 percent. Motorist speeds and travel citations have gone down at participating schools. A total of 75,000 feet of sidewalks near schools have been built.

include pedestrians in any statewide transportation funding package

If and when the state legislature enacts a new transportation funding package, this package must include funding for pedestrian improvements and programs.

- People are walking more, so we need to provide them safe pedestrian facilities. The percentage of people walking at least once for ten minutes or more in the previous week rose from 56 percent (2005) to

62 percent (2010). Nationally, 2.5 percent of workers walked to work.

- Despite the fact that 13.6 percent of Washington traffic fatalities are people either walking or biking, the state allocates only 0.5 percent of its transportation budget towards walking and biking projects.

support adding health as a statewide transportation system policy goal

House Bill 1233 adds health as a transportation policy goal, joining the six existing goals: mobility, economic vitality, safety, preservation, environment, and stewardship. This bill was introduced during the 2013 regular session.

- Adding health as a goal will require WSDOT to consider the health implications of its actions. It will also require the Office of Financial Management to establish objectives and performance measures and issue regular progress reports.
- Research shows that how the transportation system is built affects health. A well-designed system allows people to walk in their own communities, helping prevent chronic disease and improving health. However, a poorly-designed system takes away people's ability to walk, thereby contributing to poor health.
- This bill will not force anyone out of their car; it will merely help ensure that those who want to walk can do so. The choices people make are based on the choices that they have; adding health as a policy goal will expand people's choices.

2014 Legislative Agenda

reform the rules of the road requirement that pedestrians completely leave the roadway every time a car approaches

Current state law (RCW 46.61.250) requires pedestrians walking along roadways lacking sidewalk to move completely off the roadway when cars approach. Feet First advocates changing this law to only require pedestrians to yield the right-of-way by moving to the extreme side of the road.

- Requiring pedestrians to completely leave the roadway is unnecessary and unreasonable. Almost all low-traffic volume rural and residential streets have ample

room for a car to pass a pedestrian on the paved surface.

- Unpaved roadway shoulders are usually a poor place to walk; often they are unsafe. These shoulders frequently feature mud puddles, drainage ditches, uneven surfaces, and steep embankments. Forcing people to walk here unfairly punishes them for the lack of an adequate pedestrian walkway and further discourages them from walking.
- People with disabilities are often unable to completely and safely remove themselves from the paved roadway surface.
- The states of New York and Wisconsin have already reformed their own laws to allow walkers to stay in the roadway provided they make way for vehicles.
